

September 8-11, 2015, Tara Mountain, Serbia

Ovaj kompakt disk (CD) sadrži elektronsku Knjigu radova (u pdf formatu) prezenovanih u okviru Međunarodne konferencije XVII YuCorr

U knjizi su **plavom bojom** obeleženi aktivni linkovi ka pojedinim njenim delovima, iz Sadržaja do naznačenih stranica.

U vrhu svake strane nalaze se prečice ka **Impresumu** i **Sadržaju** knjige, ka **Indexu** autora, kao i opcijama za štampanje (**Print**), zatvaranje dokumanta, odnosno izlaz iz knjige (**Exit**), i za povratak na ovu stranicu (**Intro**)

This CD contains Proceedings (single pdf file) from International Conference XVII YuCorr

One can navigate easily through the book contents by a single click on the appropriate links in Contents (**showed in blue**)

All contents of the Proceeding can be accessed through following shortcuts existing at the top of each page: **Impresum** (Impress of the Proceedings), **Contents**, **Index** (Author Index), **Print** (Print manager), **Exit** (which closes the CD) and **Intro** (which leads to this page).

Pored toga na disku se nalazi i elektronska kopija Programa i Knjige izvoda radova prezentovanih na Konferenciji. Možete joj pristupiti klikom **OVDE**

CD contains also a copy of Programme and Book of Abstracts, which can be accessed by clicking **HERE**.

Programme and Book of Abstracts, which can be accessed by clicking **HERE**.

*Heavy metal accumulation in soil and plant tissues of Horse-chestnut
(Aesculus hippocastanum L.) planted in urban areas*

University of Belgrade, Bulevar Despota Stefana 142, Belgrade 11060 Serbia*

Ever-growing urban population, industrial activities and traffic, inevitably lead to increased pollution and production of waste which is disposed in urban areas. Planting green areas is one of the most important ways of mitigating pollution originating from different sources. These areas can also be used for environmental monitoring of urban conditions. Horse-chestnut (Aesculus hippocastanum L.) has been intensively grown in urban landscaping in Serbia because it is considered to have exceptional adaptability to prevailing ecological conditions and tolerance to different types of pollution. In this regard, heavy metal accumulation in soil and plant tissues (bark and leaves) in four urban parks in the cities exposed to airborne pollutants from various industrial activities, waste disposal and traffic was analyzed: Pančevo (factory of nitric fertilizers and refinery), Smederevo (iron smelter), Obrenovac (thermoelectric power plant and fly ash disposal site), Belgrade (traffic) and Control site - Topčiderski park (without direct source of pollution).

Results obtained in this study revealed toxic levels of B and Cu, but at the same time deficit in Mn and Zn in either plant tissues or soil samples in examined sites. The highest concentration of all metals in plant tissues was recorded in Belgrade ($p<0.05$), due to heavy traffic. Although A. hippocastanum is a good heavy metal accumulator, it is not suitable for planting in urban areas, due to toxicity symptoms in form of leaf chlorosis and necrosis.
